Air Campus
Clean Air Starts from Us

CAMPAIGN REPORT

25 MAY - 09 JUNE

Let's Breathe Well

RUET IPE CLUB

The **"IPE Poka Yoke Pioneers"** are taking action against air pollution, and **Air Campus** is a component of that campaign. Recently, the "Let's Breathe Well Clean Air Campaign Design Challenge" was held by the **United Nations Development Programme (UNDP)**. The **top 10 teams** were chosen from among the over 235 teams that expressed interest in taking part in this campaign from various Bangladeshi universities. The Ruet IPE Club's "IPE Poka Yoke Pioneers" is one of these 10 teams. The primary goals of the Air Campus campaign are community building and raising awareness of the effects of everyday actions on the atmosphere. How they contribute to both environmental and air pollution.

They basically designed a **fifteen-day campaign**. During this two-week period, they have run **offline and online campaigns**. They have posted infographics and reels, held sessions, and attempted to connect with individuals via these. **"Priyo Rajshahi", “Sonar Desh”, and “Daily Suprovat Rajshahi”** have also covered their campaign.

BACKGROUND AND INTRODUCTION

Bangladesh's air pollution problem is still a serious problem, particularly in large cities like Dhaka and Chittagong. Oftentimes, lists of the most polluted cities in the world include Dhaka. According to recent research, 20% of the nation's premature fatalities are attributable to air pollution. Particulate matter (PM2.5 and PM10), carbon monoxide (CO), nitrogen dioxide (NO2), and sulfur dioxide (SO2) are examples of important pollutants. In general, things like automobile emissions, industrial discharges, and construction activities worsen air pollution in Bangladesh. Strict legislative actions and public awareness initiatives are needed to reduce the health concerns linked to poor air quality in order to reduce this pollution.

Air Campus, a campaign related to air pollution has raised awareness about the severe health and environmental impacts of polluted air, which is a significant cause of premature deaths and chronic diseases. This campaign has educated the public on the sources of air pollution, such as vehicle emissions, industrial discharges, and burning of fossil fuels, and advocated for behavioral changes and policy measures to reduce pollution levels. Being a public awareness campaign, it has mobilized community action and encouraged the adoption of cleaner technology.It was an effective campaign as has lead to substantial improvements in air quality and overall public health, as well as contributed to global efforts to combat climate change by reducing greenhouse gas emissions.

GOALS

The Air Campus Campaign is a vital initiative aimed at raising awareness about air pollution and its detrimental effects on health and the environment. Their primary goal is to engage and **educate at least 2,000,000 individuals across the nation** through this campaign. By leveraging both online and offline channels, they aim to create a broad-reaching impact that inspires action and behavioral change towards improving air quality. Building on our initial success, where they **reached 40,000 individuals online in just 15 days**, they aim to maintain and accelerate this momentum. By maintaining a consistent and impactful awareness campaign, they envision a future where the entire country is well-informed about air pollution issues and is actively participating in efforts to mitigate it. They plan to hold an air strike movement with the students to make to promote their campaign and make more people engage with air pollution.

They already have chosen **7 air ambassadors** who will spread the motto among everyone in their school but they plan to choose more from different schools and colleges. They also have a **100-day plan** which includes more school visits, offline and online sessions and also more real story sharing. This initiative is not only about reaching a numerical goal but also about instigating meaningful change in attitudes and behaviors toward air quality and environmental stewardship. Through the Air Campus Campaign, the goal is to build a healthier, more informed, and environmentally conscious society.

MOTTO

The campaign is driven by a powerful and resonant motto: **"Clean Air Starts From Us."** This motto encapsulates the essence of the mission and serves as a call to action for every individual. It highlights the crucial role each person plays in ensuring the air is clean and safe. The motto emphasizes that clean air is not just a collective goal but a personal responsibility. Each individual's actions contribute to the overall quality of the air. By using the hashtag **#CleanAirStartsFromUs** in every post, they remind people that they have the power and duty to make a difference. When individuals become mindful of their own air quality and take steps to improve it, they set an example for others. This creates a ripple effect, spreading awareness and inspiring collective action. A single person's commitment to cleaner air can influence friends, family, and the community, amplifying the impact of our campaign. The motto underscores the idea that if everyone takes responsibility for their actions, the combined effort will lead to significant improvements in air quality. As awareness grows, societal norms will shift towards more sustainable practices, leading to broader changes that benefit everyone. "Clean Air Starts From Us" is more than a motto; it is a movement that empowers individuals to take charge of their environment. By fostering personal responsibility and community action, we aim to create lasting change in air quality. Their motto is to reach **SDG goals 3, 7, 11, 13 and 15**. They are "Good health and well-being", "Affordable and clean energy", "Sustainable cities and communities", "Climate action" and "Life on land" respectively. Through continuous awareness and engagement, the campaign aims to inspire a nationwide commitment to preserving the purity of the air.

TEAM INTRODUCTION

The dynamic and dedicated team known as **IPE Poka-yoke Pioneers proudly represents the RUET IPE CLUB** in the **#LetsBreatheWell campaign by UNDP** Bangladesh. This team comprises five hardworking and talented individuals, each bringing unique skills and experiences to the table.

- With over 3 years of experience in operations and execution, **Md. Tanveer Ahamed leads the team** with strategic insight and effective management skills. His leadership ensures that the team operates smoothly and efficiently towards their common goals.
- **R. Rafiul Haque Ayon** has more than 2 years of experience in finance and external affairs. His expertise in managing financial matters and external communications is crucial for the team's outreach and resource management efforts.
- **Abu Bakar Siddiq** brings over 2 years of experience in web mastering and graphic designing. His technical skills and creative design capabilities enhance the team's digital presence and ensure their campaigns are visually compelling.
- With over 3 years of experience in research and planning, **Maisha Fariha Mithila** excels in strategizing and organizing the team's initiatives. Her analytical skills and meticulous planning are essential for the successful execution of their projects.
- An expert in creative content writing and documentation with 1 year of experience, **Samia Islam** is responsible for crafting engaging and informative content. Her writing skills help in effectively communicating the campaign's message to a broader audience.

The IPE Poka-yoke Pioneers are committed to the #LetsBreatheWell campaign, an initiative by UNDP Bangladesh aimed at improving air quality and raising awareness about air pollution. This team's diverse skill set and unwavering dedication make them a formidable force in the fight for cleaner air. The team's dynamic approach, coupled with their individual expertise, positions them as key contributors to the success of the RUET IPE CLUB and the broader objectives of the #LetsBreatheWell campaign.

CAMPAIGN OVERVIEW

Their campaign activity **started on May 25, 2024**, with the inauguration. About **100 students were present** at the inauguration of the Campaign, including club moderator Md. Ariful Haque, president Mridul Hasan Arnab, general secretary Dipayan Saha Dip. They arranged both offline and online activities during this 15-day campaign activity.

They promoted their campaign online through a Facebook page “Air Campus” and Instagram ID **“AirCampus.IPE”** through various informative videos and infographics on the causes and prevention ways of air pollution. They have already created a website. Through this, the level of air pollution of the cities in Bangladesh can be known every day. Apart from this, they have also arranged a Session online. Where more than **170 students** from various colleges and schools registered and **100 attended**. The main speaker in the session was **Aung Sing Hla Marma**, Scientific Officer of Bangladesh Institute Of Nuclear Agriculture(BINA), lead of YECAP Indigenous Fellowship, and Young Climate Advocate. As an offline activity, the group organized a workshop at Agrani School and College, Rajshahi. Their program began with a student assembly. The students also did a breathing exercise in the assembly. Many students were suffering from asthma and lung diseases in the workshop. They spoke about their daily harassment due to air pollution. On asking the rest of the students, it was revealed that "every day they suffer due to the black smoke from the buses at the bus stand near the school, the construction work going on in the vicinity".Through the session, the students got to know not only about the outside house air pollution but also the air pollution that happens inside the house. Besides, how they can prevent air pollution and what steps can be taken to purify the air inside their homes, these things were also discussed through the workshop. At the end of the workshop, a few school representatives from among the willing students were selected as **“Air Ambassadors”** by the “IPE Poka Yoke Pioneers” team. **The session was a great success as it could reach out to almost 600 students.**

Apart from this, the team “IPE Poka Yoke Pioneers” also tried to raise awareness by **distributing leaflets** among the construction workers, seeing the air getting polluted inside their RUET campus due to the ongoing construction work.

OBJECTIVES OF THE CAMPAIGN

Air campus campaign is an ambitious initiative aimed at raising awareness about air pollution. Air pollution is a pressing global issue with severe consequences for our health and the planet. The people of Dhaka breathe in polluted air for **311 days out of 365 days**. But nobody seems to be concerned about it. The IPE Poka-yoke Pioneers team was created out of a deep urge to do something for the people, as nobody specifically ever mentions air pollution, even though it is a pressing issue. This team represents RUET IPE Club and all of its members. All the members of the club are doing all they can for air pollution. The major objectives behind the campaign are:

- This campaign is dedicated to educating people about the sources of air pollution such as vehicle emissions, industrial processes, household activities, and the harmful effects of pollutants. The vision of the campaign is to create a healthier and cleaner future for all.
- The Air Campus campaign promotes various strategies including reducing vehicle use, supporting clean energy initiatives, and advocating for stronger environmental policies.
- One of the key goals of the campaign is to unite people in the fight against air pollution.
- The Air campus website serves as a central hub for information and engagement.
- Recognizing the importance of educating the younger generation, the campaign offers both offline and online sessions for schools.

- As the team consists of students from the Department of IPE so the members of the IPE Club were instructed to be more careful about air pollution.
- The Air Campus campaign is committed to creating a healthier and cleaner future by raising awareness about air pollution, promoting community engagement, and empowering the next generation.

PARTICIPANTS DEMOGRAPHY

The Air Campus campaign successfully reached a diverse demographic, engaging individuals from various age groups, occupational backgrounds, and geographic locations. Initially, **school and college-going kids were targeted** for the campaign because young minds can do a lot of wonders for society. The children present in the offline and online sessions were between **the age of 12-18 years.** But it did not stop there. The team worked with **university students between 20-24 years**. Even the **laborers of 20-40 years** were also included in the campaign. So the Air Campus campaign was a campaign for all. The campaign is a nationwide initiative designed to engage individuals of all ages and backgrounds in the fight against air pollution. The efforts have spanned across various cities, with a primary focus on **Rajshahi and Dhaka**. The campaign extended to all corners of the country, ensuring widespread awareness and involvement. Extensive activities, including school visits and community engagements, were conducted in Rajshahi. Primary and Secondary School Students were engaged through interactive workshops, classroom activities, and educational programs in Rajshahi and through online sessions in Dhaka. The team also collaborated with university students across the country, focusing on research, awareness campaigns, and community projects related to air quality improvement. They reached out through workplace visits and community centers, providing practical advice and resources on reducing exposure to harmful pollutants. This awareness campaign also kept going on social media. The facebook impressions r**each is also 40k** and the organic reach is about 20k in just 15 days. And the response rate is 100%. The ratio of male and female participants were also kept in mind during the campaign. The majority of the air ambassadors are female. In offline and online sessions about **65% were female participants and 35% were male**. And on Facebook about **65.8% were men and 34.2% were women**. There were almost 10k interactions.

The Air Campus Campaign achieved a remarkable milestone by securing a place among the **top 10 contenders out of 256 competitors**. This recognition came following an intensive workshop organized by the **United Nations Development Programme Bangladesh (UNDP BD)**, where participants gained in-depth knowledge about air pollution and were encouraged to share innovative ideas. Each selected team received 10,000 taka to initiate their campaign and demonstrate their impact within a 15-day period. This funding and the knowledge imparted by the UNDP empowered the teams to implement their strategies effectively, highlighting their commitment to addressing air pollution and showcasing their potential to drive meaningful change.

15 DAYS ACTIVITIES

The team showed a mapped-out plan of 15 days in the workshop. The plan included the costs and the activities. Sharing infographics through social media accounts, sharing short videos, offline and online sessions, website building, ambassador selection, volunteers, leaflet distribution and inauguration were done in these 15 days.

INAUGURATION

The IPE Poka-yoke Pioneers team hosted an enlightening **inauguration and learning session on 25 May, 2024**, for the students of the RUET IPE Club. It was held in the seminar room of the Department of RUET IPE. The focal point of this event was air pollution and the innovative "Air Campus" initiative. The session was further enriched by the presence of our esteemed guest, Assistant Professor Md. Ariful Haque, who shared invaluable insights among the participants. The inauguration session started with a warm welcome to all participants, followed by an introduction to the "Air Campus" initiative. The IPE Poka-yoke Pioneers team provided a comprehensive overview of the project, emphasizing its significance in addressing air pollution within the campus environment. The discussion covered the following key points:

- Industrial emissions and their contribution to air quality degradation.
- The role of vehicular emissions, construction activities, and deforestation.
- The health effects of air pollution, include respiratory diseases, cardiovascular conditions, and other chronic illnesses.
- The ecological consequences, such as climate change, acid rain, and the depletion of the ozone layer.
- The importance of policy measures and regulatory frameworks.
- The role of educational institutions in fostering environmental awareness.

Then the team leader introduced the **“Air Campus”** website to the members of RUET IPE Club. The session also included an interactive segment where participants engaged in a lively discussion with **Assistant Professor Md. Ariful Haque** and the IPE Poka-yoke Pioneers team. The inauguration of the "Air Campus" initiative was a resounding success.

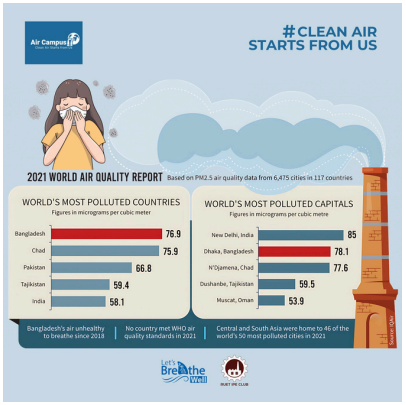

INFOGRAPHICS

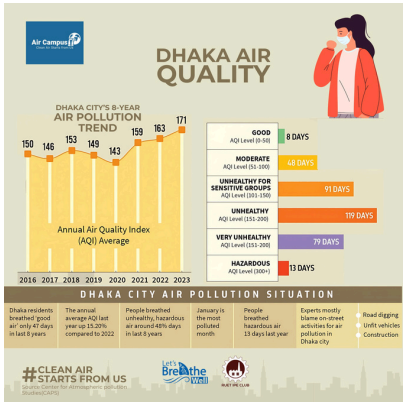

The Air Campus initiative has effectively leveraged social media platforms like Facebook and Instagram to raise awareness about air pollution through a series of thirteen impactful infographics. These infographics cover a range of topics, providing crucial information and insights to educate the public and inspire action. The post's reach was almost 16k.

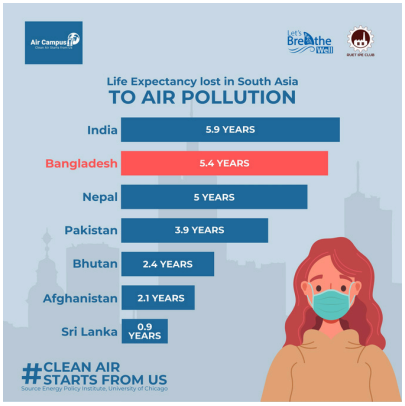

The first infographic delves into the harmful effects of air pollution on health. It outlines short-term impacts such as asthma,allergy etc and long-term consequences like chronic respiratory diseases, cardiovascular problems, and reduced life expectancy. It was mostly to make people aware of the effects of air pollution. The second infographic highlights the alarming air quality in Dhaka. It presents data on the high levels of particulate matter 2.5. This shows the alarming situation of air pollution. The third infographic provides a sobering look at the life expectancy lost due to air pollution, comparing data from various countries.The fourth infographic presents a global air quality report, ranking the world's most polluted cities. New Delhi, India, tops the list, closely followed by cities in Bangladesh. This is to make people aware of this silent killer. The fifth infographic suggests practical measures individuals can take to improve air quality. Recommendations include using air purifiers, encouraging cycling over driving, wearing masks to reduce inhalation of pollutants, and planting trees to enhance air quality. This shows the way people can be safe from the health effects. The sixth infographic focuses on the air quality situation within Bangladesh, showing a map of various districts. The seventh infographic highlights the economic burden of air pollution, showing that nearly a trillion dollars are lost annually due to health care costs, lost labor productivity and other economic impacts. The eighth infographic analyzes daily air quality patterns in Dhaka. It reveals that the worst air quality is typically observed between 3 to 11 AM, while the best periods are from 3 to 6 AM and 9 to 11 PM. The ninth infographic compares indoor and outdoor air pollution, highlighting that indoor pollution is a significant health threat, causing approximately 74,000 deaths annually. It stresses the importance of addressing indoor air quality alongside outdoor pollution. The tenth infographic details the major pollutants, including PM2.5, PM10, nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and carbon monoxide (CO), and their effects on human health and the environment. The eleventh infographic identifies the

primary sources of air pollution. The twelfth infographic outlines key policies and recommendations for reducing air pollution. The final infographic revisits the global air quality report, emphasizing the need for continued vigilance and action.

Through the visual representations, Air Campus effectively communicates complex information in an accessible and engaging manner, fostering a more informed and proactive community. These posts were uploaded to make people aware of the current situation in our country and take the initiative to reduce it. **People mostly aged between 18-24 reacted to the post**. They also reached **people aged 24-34**. The posts reach is **almost 14k** and the impressions **reach is 40k in total.**

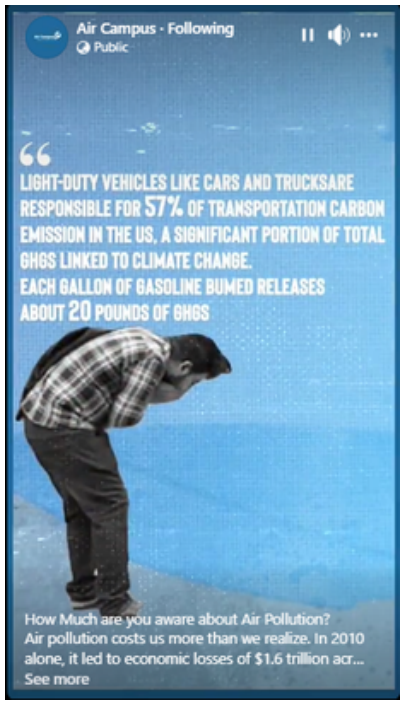

SHORT VIDEOS

The Air Campus has effectively used short videos on social media platforms such as Facebook, Instagram, and TikTok to engage with a broader audience and raise awareness about air pollution. Six videos or "reels" have been uploaded, each focusing on different aspects of their campaign and the issue of air pollution. **The first video captures the school campaign conducted at Agrani High School and College**. It showcases the engaging participation of students and the valuable lessons they learned about air pollution. The video highlights the importance of educating young minds on environmental issues. The second video provides a look at the school campaign. Viewers can see the interaction between the students and the team members of the IPE Poka-yoke Pioneers. The reel emphasizes the engagement of the kids, portraying the campaign as an interactive and impactful educational experience. The third video features a **university student discussing her views on electric**

vehicles (EVs) and their implementation in Rajshahi. She shares her observations on how EVs have contributed to reducing both air and noise pollution in the city. **The fourth video addresses the harmful effects of air pollution on health. It includes footage of a student suffering from respiratory issues, illustrating the severe health impacts of polluted air.** This video aims to evoke empathy and a sense of urgency among viewers, encouraging them to take action against air pollution. The fifth video features **another university student who talks about the significant changes he experienced after moving from Dhaka to Rajshahi**. He describes the improved air quality and overall environment in Rajshahi. His testimony serves as a powerful narrative on the benefits of cleaner air. The final video focuses on the major effects of brick kilns on air pollution, presented by a university student. He discusses how brick kilns contribute to significant air quality degradation and their environmental and health impacts. This reel aims to raise awareness about industrial sources of pollution and the need for stricter regulations. All these videos are made to make people more careful about air pollution and to motivate people to make this country a safer place for everyone.

OFFLINE SESSION

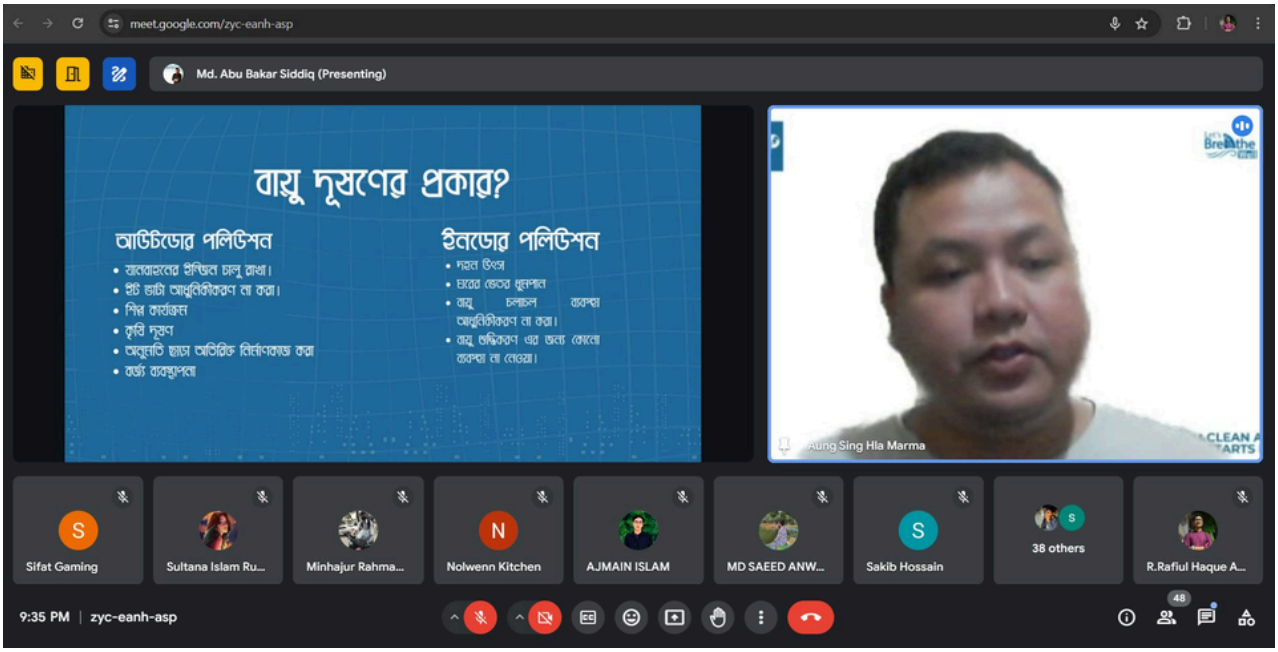

On **May 26 2024, the Air Campus initiative organized a significant offline campaign at Agrani High School and College**. Agrani High School and College was chosen out of many schools in
Rajshahi because the school is situated beside the construction area of RUET. So the students have to go through the effects of air pollution without even noticing. So, by telling them about the effects of air pollution awareness was created among them. They got to know about the effects of it and were motivated to take steps against it. **About 600 students were present** in the campaign. **About 65% female students were present and 35% male students were present in the session.**

This session was part of a broader effort to raise awareness about air pollution and its impacts and to equip young minds with knowledge and practical skills to combat this pressing issue. The core of the campaign was an interactive discussion about air pollution, starting with an outline of the major sources and types of air pollutants. The specific health problems caused by these pollutants, including asthma, bronchitis, cardiovascular diseases, and reduced lung function, were highlighted. An essential part of the session was listening to the students' experiences and concerns regarding air pollution. Many students shared personal stories about how air pollution had affected their health or the health of their family members. They also shared what they learnt from the session. They talked to the team about the session and how they felt about it. They enjoyed it a lot during the session. From this session, students gained a deeper understanding of where air pollution comes from and its various health and environmental impacts. During the assembly, a breathing exercise was conducted to assess the students' lung condition, with 80% failing to hold their breath for more than 60 seconds. By this, they became aware of their lung's state. Students were encouraged to become advocates for clean air in their communities, spreading the knowledge they gained to their families and peers. There were also some activities done in the campaign. They were provided sticky notes to write the things they learnt and some leaflets were given to them. The event underscored the importance of educational initiatives in fostering environmental awareness and action.

ONLINE SESSION

The Air Campus initiative conducted a successful online awareness **session on 7th June 2024,** engaging students from **Khilgaon Government High School Science Club and Sabujbagh Government College Science Club** about air pollution. The session, titled **"Breath Easy: Promoting Clean Air for a Healthier Future,"** was led by the inspiring **facilitator Aung Sing Hla**. Nearly **200 students registered** for the session. Approximately 100 student actively participated, engaging with the material and the facilitator throughout the event. The session aimed to provide comprehensive knowledge about air pollution, its sources, effects, and mitigation strategies. The facilitator encouraged students to share their thoughts, experiences, and questions. At the end of the session, students shared what they had learned and how they planned to apply this knowledge. Many expressed a newfound understanding of the severity of air pollution and its impacts on health and the environment. The online session was not only informative but also motivational. Through the enthusiastic participation of students from Khilgaon Government High School Science Club and Sabujbagh Government College Science Club, the session achieved its goal of promoting clean air for a healthier future.

WEBSITE

The **Air Campus website**, **www.aircampus.org**, is a great tool in the fight against air pollution in Bangladesh. By providing **real-time air quality data**, issuing air quality warnings, and offering comprehensive educational content, **the website empowers users to make informed decisions about their health and environment**. This website is an essential resource for anyone interested in understanding and addressing air pollution, offering a range of features and tools to educate and engage the public. One of the standout features of the Air Campus website is its ability to display live air quality data for various districts in Bangladesh. This real-time information helps users stay informed about the air quality in their specific location or any other district they are interested in. The website also provides air quality warnings for cities across Bangladesh. These alerts inform users about dangerous pollution levels, allowing them to take necessary precautions to protect their health. Air Campus's website is a rich source of facts and information related to air pollution. This educational content helps users understand the severity of air pollution and the importance of taking action to mitigate its effects. Visitors to the website can easily contact the IPE Poka-yoke Pioneers team through a dedicated contact form. This feature allows for direct communication, enabling users to ask questions, seek further information or provide feedback on the initiative. For

those interested in taking a more active role in combating air pollution, the website offers a form to become an **"Air Ambassador."** The website also features a section dedicated to the team members and volunteers of the IPE Poka-yoke Pioneers. This section provides a glimpse into the people behind the initiative, showcasing their dedication and efforts in fighting air pollution.

AMBASSADOR SELECTION

The selection of the **first seven Air Ambassadors** marks a significant milestone for the Air Campus initiative. The inaugural group of Air Ambassadors were selected from Agrani High School and College, with many registering during their campaign day. These ambassadors stood out for their enthusiasm, commitment, and proactive approach to tackling air pollution. They are Ifat Akhter Ifa, Sarah Alin, Tookir Ahmed, Femina Islam, Rabiya basori, Mahmudul Haque and Erana Sultana . In addition to the online registration, potential ambassadors are also identified through various Air Campus sessions. Air Ambassadors play a crucial role in the Air Campus initiative. Ambassadors are

tasked with educating their peers and communities about air pollution, its effects, and ways to mitigate it. They advocate for cleaner air policies and practices, engaging with local authorities and organizations to promote sustainable solutions. They provide valuable feedback to the Air Campus team about the effectiveness of campaigns and suggest improvements. Ambassadors also report on the progress of their initiatives and the impact they are making in their communities.

SONG FOR PROTEST

The Air Campus initiative has created a song that addresses the pressing issue of air pollution in Bangladesh titled **"Batash Suddho, Jibon sundor".** This song is more than just a melody. It is a powerful narrative that captures the stark reality of air pollution. It paints a vivid picture of the transformation from **a time when the skies were clear and the air was fresh**, to the present day, where smog and dust have become a common sight. This contrast underscores the severe impact of industrialization, urbanization, and unchecked pollution on the environment. One of the central images in the song is the **"smog of dust"** that now blankets many parts of Bangladesh. The song also touches on the discomfort associated

with **wearing masks, a reality that has become all too familiar in heavily polluted areas**. Another significant theme is the difficulty people experience in breathing due to poor air quality. The lyrics convey the frustration and health issues that arise from inhaling polluted air. Despite the grim reality depicted in the song, its ultimate message is one of hope and action. The Air Campus song is a testament to the power of art in driving social change.

VOLUNTEERS

The success of the Air Campus campaign is deeply rooted in the dedication and hard work of its volunteers. These individuals have contributed their time, skills, and passion to various aspects of the campaign, ensuring its smooth execution and impactful outreach. Ahsanul Habib has played a crucial role in the Air Campus campaign by developing the Air Campus website. His technical expertise and commitment have ensured that the website is user-friendly, informative, and effective in providing real-time air quality data. The website serves as a central hub for information, resources, and engagement, and Ahsanul's contributions have been vital to its success. Samieyul Islam Yamaan has been the creative force behind the campaign's video content. As the video editor, Samieyul has crafted compelling and visually engaging videos that communicate the campaign's message effectively. His work includes editing short videos for social media platforms like Facebook, Instagram and TikTok, which have been key in reaching a broader audience and raising

awareness about air pollution. Arnab Acharjee has captured the essence of the Air Campus campaign through his lens. As the photographer for offline sessions, Arnab has documented the interactive activities, workshops and engagement sessions, providing a visual record of the campaign's impact. The production of short videos for the Air Campus campaign has been a team effort, with several volunteers contributing in the video as the speaker and they are, Md. Abdullah Al Riyadh, Talha Jubayer, Sadia Zaman and Hasin Abrar Soumik. These volunteers have worked tirelessly to create, shoot and edit the videos that have been instrumental in the campaign's outreach. Without the invaluable contributions of these dedicated volunteers, the Air Campus campaign would not have achieved its current level of success. Their hard work and commitment have been the backbone of the initiative, ensuring that it runs smoothly and reaches as many people as possible.

LEAFLET DISTRIBUTION

Leaflets about air pollution were distributed on June 5, 2024. As part of the ongoing efforts to raise awareness about air pollution, the Air Campus team conducted a targeted leaflet distribution campaign at construction sites in the Rajshahi University of Engineering & Technology (RUET) and throughout Rajshahi. The team visited 11 construction sites within the RUET campus. They also visited many construction sites in Rajshahi. These sites were chosen because construction activities are a significant source of air pollution, and laborers working in such environments are often directly exposed to harmful

dust and particulates. The leaflets distributed during the campaign contained vital information on identifying common pollutants at construction sites, describing the adverse health effects of air pollution and encouraging workers to adopt practices that minimize dust generation and pollution. They didn't just hand out the leaflets, they also took the time to engage with the laborers, explaining the content and answering any questions they had. The leaflet distribution campaign was met with a positive response from the laborers, many of whom were previously unaware of the specific health risks associated with air pollution at construction sites. This effort is a testament to the commitment of the Air Campus team to create a cleaner, healthier environment for all.

OUTCOME

The campaign did a lot of activities and through the activities got the chance to meet people of different ages and from different backgrounds. The inauguration laid a strong foundation for future learning and action-oriented projects within the IPE Club, fostering a deeper understanding of air pollution and the innovative "Air Campus" initiative among participants.

- The infographics raised awareness about the short and long-term effects of air pollution, Dhaka's poor air quality and global air quality trends, empowering individuals with knowledge to make informed decisions. By highlighting the health impacts, economic burden and sources of air pollution, the infographics motivated viewers to take action, whether through personal lifestyle changes or advocacy efforts.
- The short videos engaged audiences on social media platforms, effectively communicating key messages about air pollution and its impacts.
- The online session empowered participants with knowledge about air pollution, health effects and mitigation strategies, encouraging them to become advocates for cleaner air.
- The **offline session reached 600 students from different schools**, providing them with valuable information about air pollution and practical breathing exercises to improve respiratory health. Face-to-face interactions allowed for personal connections and meaningful discussions, deepening participants' understanding and commitment to addressing air pollution.
- **The website provided real-time air quality data,** educational resources, and a platform for community engagement, making information about air pollution easily accessible to the public. Through features like air quality warnings, contact forms, and ambassador applications, the website encouraged active participation and advocacy for cleaner air.
- The selection of ambassadors empowered individuals to take on leadership roles in raising awareness about air pollution and driving positive change in their communities.
- The song evoked powerful emotions and sentiments about the impact of air pollution on daily life, inspiring listeners to take action for cleaner air.
- Volunteers played crucial roles in website development, video production, photography, and other aspects of the campaign, contributing their skills and passion to the cause. Without the dedication and efforts of volunteers, many campaign activities, such as video creation, website management, and offline engagement, would not have been possible.
- Leaflet distribution raised awareness among laborers about the health risks of air pollution at construction sites and provided practical guidance for protecting themselves.

Overall, each activity within the Air Campus initiative has contributed to raising awareness, empowering individuals, fostering community engagement, and driving positive change in the fight against air pollution.

REACH

Offline: Their campaign on air pollution received significant media attention, culminating in comprehensive coverage by the leading newspaper **"Sonar Desh".Almost 600 copies** of this paper have been sold. They have also arranged a session online. Where more than 170 students from various colleges and schools registered and **100 attended**. They tried to raise awareness by banners, posters, and distribution of leaflets all over the Rajshahi. So, their direct offline connection is about **1K,** and indirectly they have reached to almost **3k** individuals.

Online: Their campaign has gotten not only offline but also online recognition by several portals, such as **" Sonar Desh", "Priyo Rajshahi", and " Daily Suprovat Rajshahi"**.They promoted our campaign online through a **Facebook page "Air Campus" and Instagram id "AirCampus_IPE" , TikTok id "Air Campus"** through various informative videos and infographics. As an offline activity, they organized a workshop in Agrani School and College, Rajshahi. The program began with an assembly of 100 students. Then the session was a great success as it could reach out to **almost 600 students**.Their **total online reach is 100K.**

This exposure has amplified our message, raising public awareness about the pressing issue of air quality and the urgent need for actionable solutions. The coverage highlighted key aspects of our campaign, including community engagement activities, educational workshops, and policy advocacy efforts. This recognition not only validates the hard work of their team but also mobilizes further support from stakeholders, enhancing the impact of their initiative in promoting a healthier environment.

EVALUATION

1. Strengths

- **Comprehensive Reach:** The campaign effectively utilized both online and offline channels to reach a broad audience across different age groups and geographic locations.
- **Engagement:** High levels of participation were achieved through interactive sessions and social media engagements, with significant online impressions and interactions.
- **Educational Impact:** The initiative successfully raised awareness about air pollution and its effects, promoting behavioral changes among participants.

2. Weaknesses

- **Limited Duration:** The initial campaign period of 15 days was relatively short, potentially limiting the depth of impact.
- **Resource Constraints:** Financial and logistical limitations might have restricted the scale of certain activities and outreach efforts.

3. Areas for Improvement and Potential Modifications

- **Extended Campaign Duration:** Prolonging the campaign period could allow for more sustained engagement and deeper impact.
- **Enhanced Resource Allocation**: Securing additional funding and resources could expand the scope and scale of activities.
- **Broader Collaboration:** Partnering with more organizations and institutions could amplify the campaign's reach and effectiveness.
- **Follow-up Activities:** Implementing follow-up sessions and activities to reinforce the initial awareness efforts and track progress.

IMPACT AND CONCLUSION

The Air Campus Campaign has laid a robust foundation for raising awareness about air pollution and advocating for cleaner air. The diverse range of activities and strategic use of digital platforms have effectively engaged a wide audience, fostering a more informed and proactive community. The campaign's success in securing a top 10 position among 256 competitors highlights its potential for driving meaningful change.

Moving forward, extending the campaign's duration, securing more resources, and enhancing collaborations could further bolster its impact. The initiative's motto, "Clean Air Starts From Us," encapsulates the core message that individual actions contribute significantly to improving air quality. By continuing to promote this ethos, the Air Campus Campaign can inspire broader societal changes, leading to a healthier and cleaner environment for all.
